Solicitation Number:	RFQS 6100 CLMP365
Description:	Concourse B and Tunnel Design Services
Summary:	<p>This project will build a new Concourse B to meet the passenger activity level demand for gate capacity. Terminal concourse to include 20 gates, boarding bridges, hold rooms, concessions, restrooms, clubs, apron support spaces, back of house, baggage makeup, tug and GSE spaces and other support spaces. This project supports the new gates at Concourse B by constructing apron, taxiway connectors, drainage, utilities, lighting and related airfield infrastructure to support the safe movement of aircraft on the airfield. This project may include aircraft parking spaces surrounding new midfield concourse to support 20 gates. Infrastructure for a hydrant system is an alternative scope to include if airline consortium agrees to include. This project will also design and construct a new Passenger and Utility Tunnel, and related infrastructure space for future Automated People Mover (APM), BHS equipment and utility/systems connections at the BJT and Concourse B, temporary ground loading options, and related scopes. Airport Principal Architect/Engineering is expected to provide preliminary estimates, project definition, hydrology and structural analysis, code/egress, connections, cross-section profile and conveyance configuration. The tunnel will be approximately 840 feet long, spanning the distance between the two Concourse facilities. Final design will be coordinated with the airlines, to ensure appropriate operational requirements are considered. The conveyance will include moving walkways in the first phase, and potentially the capability to add an automated people mover ride system on the long term, as needed.</p>
